The Honorable Senator Steve Padilla
Senate Committee on Local Government and Labor
5400 N Lake Rd SSB 160

Subject: Support. SB-46, Senator Steve Padilla

Dear Senator Padilla,

The Sierra Club writes regarding “Salton Sea Research Grant”, establishes the UC Salton Sea Research Cohort, a cohort that is to conduct research on conservation methods of the Salton Sea. This policy aligns with our goals on the conservation of nature.

The Salton Sea has experienced a declining shoreline that as a result, releases hydrogen sulfide gases into the air. Hydrogen sulfide gases contribute to air pollution. This especially affects neighboring cities to the Salton Sea. Air pollution is known to cause respiratory diseases. SB-46 would allow for student researchers to seek for methods of conservation of the Salton Sea. Ultimately, this would help find a solution to the pollution. Additionally, this bill would also establish precedence for the UC system to work to address climate issues.

For these reasons, the Sierra Club supports this bill.
